

PRESS RELEASE

Toulon, 31 May 2018

Preparing for the future: Naval Group presents its latest innovations at the Naval Innovation Days on the Toulon Naval Base

On 30 and 31 May 2018, Naval Group will bring together, for the third consecutive year, its governmental, industrial and academic partners. Over the course of these two days, Naval Group will present its innovations at the service of naval-force combat superiority. The exchanges will address the projects that need to be accelerated to allow Naval Group's client navies, the first of which being the French Navy, to fulfil their current and future missions.

"The last few years have seen a rapid ramping up on the international stage of the competencies of not only the armed forces, but also industry, from emerging economies. If we want to ensure that the French Navy maintains its technological combat superiority and maintain our attractiveness for the export market, we must place innovation at the heart of our strategy and accelerate our initiatives", explains Eric Papin, Director of Innovation and Technological Expertise.

A live demonstration will in particular show a maintenance operation on a vessel at sea performed collaboratively, thanks to virtual reality and augmented reality, between the crew and a Naval Group technician located in the Operational Digitally Integrated Support Center at the Toulon Naval Base.

Roundtable discussions, bringing together Naval Group, the French Joint Chiefs of Staff, the French Defense Procurement Agency (DGA - Direction générale de l'armement) and major industrial partners, will allow the challenges and keys to success for continuous innovation at the service of naval programs to be shared.

Workshops and demonstrations will then allow them to discuss the current innovation projects, express the future needs and build common roadmaps.

Naval Group is a prime contractor for the French naval defense industry and capitalizes daily on an innovation ecosystem, which it wished to associate with the Naval Innovation Days. These industrial (Dassault Systèmes, Cobham) and academic (ENSTA Paris Tech, Ecole Centrale de Nantes, Université d'Aix-Marseille) partners or innovative start-up SMEs (ALSEAMAR, SNIPS, Studio NYX, EGERIE) will thus be present for a wide

variety of subjects such as artificial intelligence, additive manufacturing or cyberdefence.

The ceremony for the La Pérouse Prize, awarded by the Naval Group Scientific Council, will take place on 31 May.
